TOP 10 TINY HOMES THAT ARE THE PERFECT MICRO-LIVING SETUPS FOR YOU

BY SRISHTI MITRA / 06/26/2023

Tiny homes gained popularity a couple of years ago, and since then they've cemented their place in the world of architecture. What started off as a cute little trend is now turning into a serious option for home spaces. You could say that 2022 was the year of tiny homes! And I do believe this will continue well in the future. They are a space-saving and eco-friendly living solution that reduces the load on Mother Earth. They're simple and minimal alternatives to the imposing and materialistic homes that seem to have taken over. And if you love exploring tiny homes, as much as I do, then you've reached the right spot. We've curated an eclectic and exciting range of micro homes that will totally satisfy your love for tiny homes! From a 40' highly insulated converted shipping container tiny home with a pocket-friendly price tag to a tiny wooden cabin in Cape Town – there's a tiny home here for everyone!

5. Napoles House

PJCArchitecture designed a micro-home in Napoles, Ecuador with two interesting brick forms that are connected via a glass bridge that relies deeply on passive heating and cooling. The weekend home occupies 700 square feet and was built using locally sourced brick, steel, concrete, and glass.

Why is it noteworthy?

"The design is based not only on the client's needs but on her desire to embrace the local environment, culture, and vernacular," said lead architect Nandar Godoy-Dinneen. "It was also heavily shaped by the availability of construction materials and by working within the local traditions." The home quite interestingly looks like a single solid brick form.

What we like

- Built using locally sourced materials
- Constructed by local crew and craftsmen

What we dislike

- No active systems, which may be inconvenient for some people
